Meet Electric Car Owner
Dina Belon-Sayer

“I am very lucky that my employer allows me to charge my car for free. Many employers are providing this benefit to incentivize early adopters of electric car technology.”

Dina drives 104 miles round trip each day and was spending about $400 a month in gas alone commuting to and from work. Now she spends less than $50 a month in gas, a net positive return on her investment the first month she started driving her electric car. Dina says she feels she is helping the environment and improving her own personal finances.

ABOUT ELECTRIC VEHICLES
The cost to charge an electric vehicle may vary depending on electrical rates. On average, people like Dina pay about $1 per charge to plug in their cars at home.

Find an electric vehicle charging station near you.
